

Parental Evaluation of a Maths Strategies Morning

Objectives:

To provide information about the maths strategies we use in school to support children's learning and development.

Date: 21.09.2018

1. Did you find the meeting useful in terms of supporting your child at home? Yes 100%

Comments:

It was useful to see Y2 children doing the work

Helps to know how to teach and to be able to show in the same way as taught in the classroom

Great to understand the methods used so we can use them at home

Great to have examples of the strategies used and so helpful to have the children showing the different ways they do it.

It's familiarity with language used and methodology that is most needed.

2. Were the slides informative? Yes 100%

Comments:

Very useful

Great to have access to these at home

3. What other information would be useful to help you support your child?

Make homework questions clearer and give more examples

Thank you we will bear this in mind

Would be good to understand what level of competence is needed in the SATs

This will be explained in the SATs Information Evening in the Spring

4. Are there any questions that you would like to ask after today's session?

A great help, thank you!
